zhiliam:

As Volcary has stated (many thanks for the data), many of the buildings in estates, like stages and shrines, give bonuses to stats and attributes. Likewise, the trees and flowers in the estate also have bonus modifiers. It can easily be checked by hovering over the item when in build mode; a tooltip will pop up with an accurate and decent description.

These bonuses will then be divided among ALL the members at an estate. However, please note, not all bonuses can be used by everyone. Nonetheless, it still gets divided and becomes "wasted away" for certain characters. Your hypothetical examples are basically correct for understanding how the bonuses get spread out as estate population rises.

On furthering the discussion, stages and shrines will give benefits only after characters are born and living in the estate.

On the other hand, flora are split into two groups: those that function only after a character is born as mentioned before, such as fertility for only womanfolk; and those that only give the bonus to newborns. For example, longevity, beauty (charisma), and luck only work for newborns.

The ones related to personality traits most likely contribute to the amount of shenanigans a clan may encounter, such as illicit affair and malpractice pop-up events in the clan.
